- **We had the meeting last week regarding the implications of including KLM under the same pricing agreement as Air France. The conclusion is that the impact is very limited: KLM's part number pricing will remain essentially unchanged, and if any adjustments occur, they will not fall below current Air France levels at this stage. However, given that procurement is being consolidated, we anticipate they may request additional concessions. This will be reviewed and discussed further during the September 9th meeting in Paris.**
- **SFH recommends scheduling a short internal follow-up on September 10th to review the outcomes and define the next steps.**

KLM

Airline	KLM		Aircraft	TBC A350	11
Surface(s)	Vertical		Seat OEM	Stelia	
Design Stage	Certification	Commercial	Designer	Airbus	
Completed	Completed	Completed	Sub Contactors	TBC	

- **KLM has shared a solid forecast for their upcoming program. While the numbers are reasonable, actual consumption is expected to be 20–30% higher, possibly more. They have requested a quotation for September 12th. SFH recommends regrouping internally on September 10–11, immediately after the Air France–KLM meeting, to align on pricing strategy and prepare for likely rebate requests.**

- **No major updates this week. Most orders across the group have been processed and entered into the system, and all required quotes have already been issued. Looking ahead, we expect new POs specifically for Lufthansa (not the wider group) to be placed via Stelia, as the second wave of linefit programs begins. This will likely require material deliveries by end of this year or early next year. SFH will follow up directly with Stelia Program Management to ensure timelines are anticipated and properly supported.**

- **An internal meeting is scheduled this week to prepare for SFH's upcoming visit with Emirates. The focus will be to analyze purchasing patterns and investigate the reasons behind the recent dip in POs. Possible explanations include the completion of A380 retrofit programs and a slowdown in maintenance-related orders. This would follow the post-COVID surge, with retrofit demand now tapering off and not yet fully offset by new linefit requirements.**

- **Following several exchanges last week with Batuhan, we learned that the technical lead for the Royal Lux program has left TCI. His prior requirement limited testing to vertical burn only, whereas full heat release and smoke density should have been included. Responsibility now falls to Batuhan, who has agreed to a conference call this week between TCI and Tapis to align on proper requirements. Given language challenges with TCI, SFH recommends keeping communication simple to avoid misunderstandings.**
