- BC3 transition for ACH parts evaluation: Stelia confirmed test preparation for new treatment - we should have more info within 4 weeks.
- November Stelia visit for Qatar project provides opportunity to review progress with program manager
- **KLM's material specification complexity is ongoing as multiple companies are involved, requiring clarification of exact needs for each reference while ULFRB 914-5417 material has been confirmed with different treatments required for MGR and ACH programs.**
- **Belgraver challenges persist as they remain unfamiliar with TAPIS processes despite multiple explanations, requiring extended exposure to products and additional training time to fully grasp what is needed on their side for successful program execution.**

- Overall program status is positive with only remaining technical challenge being creases appearing on concave areas of front panels, where thinner aluminum testing reduced but did not completely solve the issue requiring continued technical solution development.
- Purchase order alignment is progressing well with all POs expected to be rectified/amended and brought online, while certification test plan updates and panel production for both QTU and marketing cabin remain on schedule for completion.
- BHCSS raw material timing is critical for marketing mockup delivery requirements, requiring close coordination to ensure on-time arrival and avoid program delays.

- The situation with TCI remains complex. They now intend to test the material unsupported for vertical burn, heat release, and smoke density. Furthermore, they continue to reference the material as Alcantara and Tapisuede, still using the Tapisuede part number. It is not yet clear whether they actually used standard Tapisuede for their testing or not.
- **We have shared the video of the unsupported test with them but they have not yet confirmed if that sort of test would fit their needs or if they do agree with our interpretation.**
